Resume (PDF)
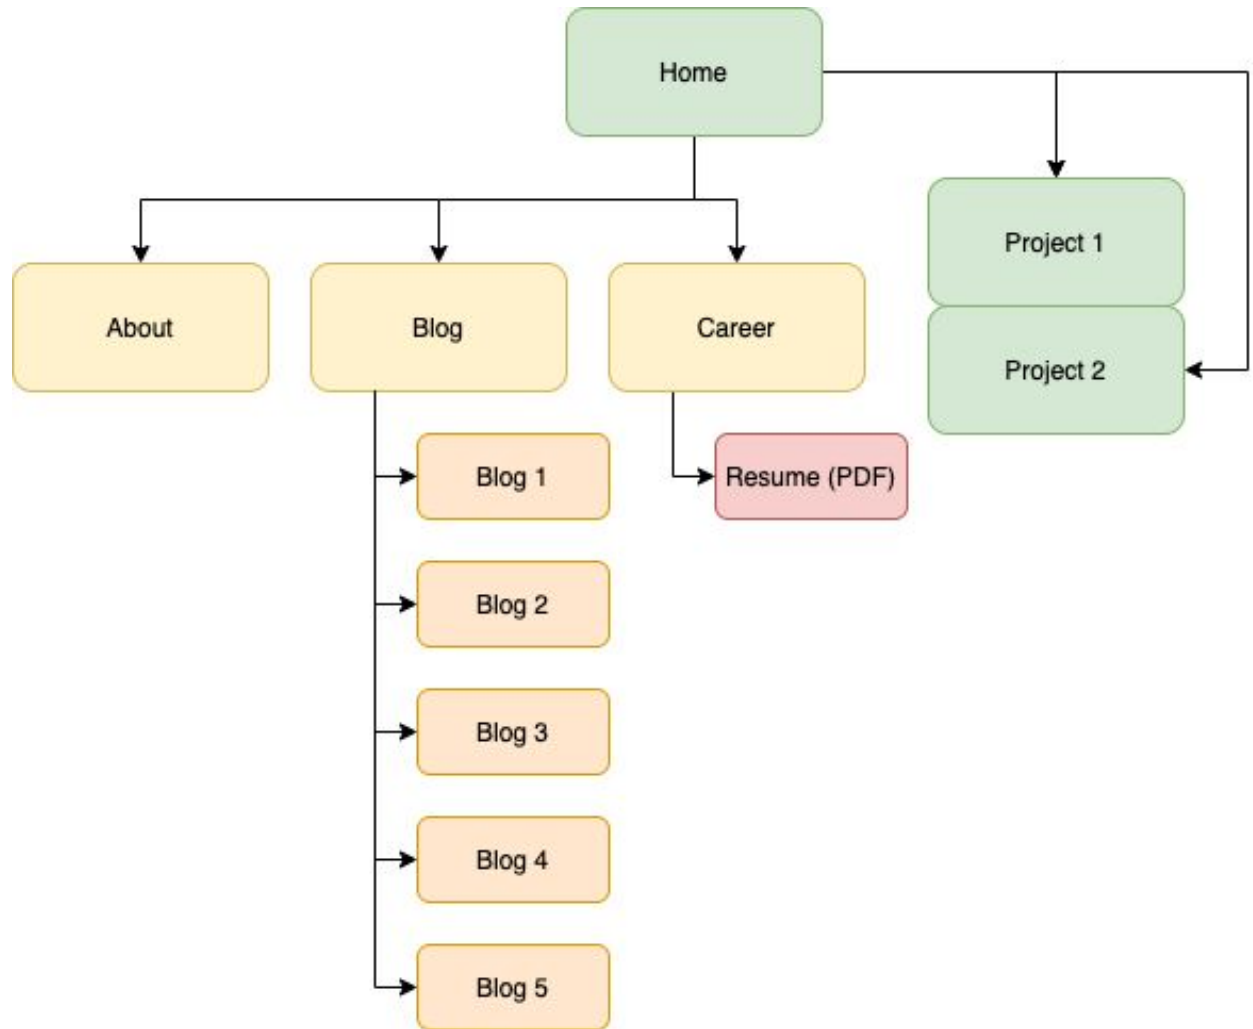

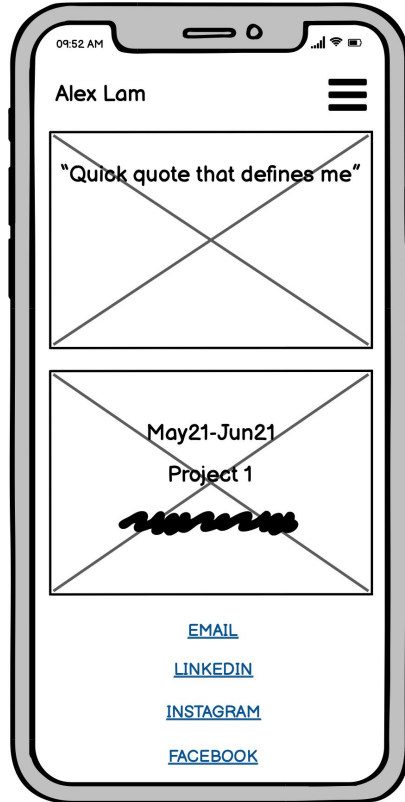

Design Process and decisions

1. Design Sitemap of what I want to include in my portfolio
2. Create a wireframe/mockup of what i intend my website to look like.
3. Start coding HTML and CSS.
4. Moved sitemap and wireframes to bin because my ideas changed as I was coding my HTML/CSS.
5. Repeat Steps 1 and 2.
6. Continue coding, inevitably think of new ideas that I wanted to include in my website and not finish my current code.
7. Leaving the code alone because I had no more time to add new/change features.

Aesthetic Features

- Minimalistic approach
- Wanted to include more images since pictures paint a thousand words
- White and green are my new favourite colour
- Since content was centered for large devices, media break points were mainly applied for mobile devices
- Included contact links + copyright comment at footer of all pages

Index/ Home Page - Mobile
